

Dear Prof:

I'm Gang Liu, 26 years old, a 2nd year Ph.D. candidate from the Institute of Robotics and Intelligent Systems, School of Mechanical Engineering, Xi'an Jiao Tong University, P. R. China, supervised by Prof Jing Wang. I plan to apply for a Chinese National Fund program, which will support those Ph.D. candidates in China to go abroad to some world-class Universities in their fields. This program is a short time (6-24 months) co-education experiences more like a visiting scholar.

My research area is about the biological signal decoding algorithm [brain-computer interface (BCI) and myoelectric interface] and robotic. I am crazy about math and computer.

Self-assessment: I thought I am a student with a lot of "ideas" and strong execution, and I am obsessed with academic research, but my writing ability is quite limited.

If you can give me a chance to study in your team, please inform me.

I hope you are happy and healthy forever.

Yours sincerely,

Gang Liu
